Effects of Hospital-Community-Public Health Integration on Racial and Ethnic Disparities in Mental Health

The major goals of this project are to determine the effects of community benefit state laws on racial and ethnic disparities in health care access, quality, and costs among people with mental illness; identify variation in hospital-based adoption of care coordination practices and their correlation with patient and community level socio-demographics, local public health resources, and the extent of community benefit law implementation; and determine the impact of care coordination practices between hospitals, communities, and public health agencies on racial and ethnic disparities in health care and health outcomes for people with mental illness.

Effect of Hospital and Community Care Coordination on Health Care Access, Quality and Equity among Individuals with Risk Factors or Diagnosis of ADRD

The major goals of this project are to create a data infrastructure of linked Medicare claims data, conduct feasibility tests of care coordination impact, and provide preliminary finding of the association between ACO model/care coordination practice and health care use for people with ADRD or risk factors for ADRD.
